

Direct Vent Gas Heaters

Our direct vent gas heaters require NO electricity. With up to 21,000 BTUs per hour for the DV21 model, they are designed to heat a space up to 700 Sq. Ft. These units mount on any outside wall for direct venting. The matchless piezo ignition makes lighting easy. The automatic shutoff and thermocouple safety valve makes these units safe in any room in your home. They also have a built-in thermostat with one dial control that makes using them easy.
